

# Enterprise Software Development- Solo Django Assignment

## Barely Used Books Web Application

Alee Bonham

Cloud Deployment URL: <https://aleebonham.pythonanywhere.com>

Github Repository: <https://github.com/aleebonham/Solo-Django-App.git>

### Design:

This application was built with a Django framework with a structure based on models, templates, and views. It has book browsing, adding to cart, checkout function, user authentication, profile creation, and an admin dashboard.

### Development:

Created login, registration (UserCreationForm), and user view protection

Created book browsing, detail views, cart management, and order placement.

Created a superuser-only admin dashboard with book, user, and order information.

Designed models: Book, Customer, User, and Order

Secured views using @login\_required and restricted admin tools to superusers

### Users:

Users must register and login to place orders.

#### User Capabilities:

View books available, Add/remove books from cart, Place orders

#### Admin Capabilities:

View stats and users, Add/edit/delete books

Tested for form validation, user roles, and ordering logic.
